Advised Tape & Wrapping Material Combinations

Being aware of which tapes are used with a particular material can significantly reduce the need for new products to be added to circulation. Correct combinations can avoid the need to cut into materials when unwrapping, allowing them to be saved and reused many times and therefore avoiding unnecessary waste. Refer to this chart to extend the life of packaging supplies and consider the combinations before making purchases.

This list is by no means exhaustive but will be added to over time. Get in touch with your suggestions for other wrapping material and tape combinations.

Definitions of Colour Codes:

- Red – Combination not compatible for material's reuse. Avoid where possible.
- Green – Advised combination in order to extend material usability.

TAPES
